PRECISE

SCALABILITY IS WHAT WE DO!

2024

We help start-ups, small, medium businesses (SMEs) and Fortune 500 companies in leveraging technology to scale their business.

ABOUT US

A Brief Story About The Company

We are a team of passionate tech professional with over 5+ years of experience. We pride ourselves on our ability to deliver top-quality IT solutions that help our clients streamline their operations, reduce costs, and increase productivity by leveraging the latest technologies and industry best practices.

In addition to our technical expertise, we are committed to providing exceptional customer service. We work closely with our clients to understand their unique needs and goals, and we tailor our services to fit their specific requirements. *"Let us manage all your technical needs, so you can focus on growing your business."*

VISION

"To provide scalability to the world with an aim to intensify and reinforcing our team of tech innovator across every sub continent of this earth"

MISSION

Empower and inspire everyone we work with by fostering a unique culture driven by a purpose. Our goal is to establish solid, trusting relationships with both our employees and clients that will last over time.

KEY OFFERINGS

Discovery & Design

- Discovery workshop
- Analysis
- Prototypes
- UI/UX
- Wireframes

Web Development

- CMS
- Ecommerce
- API & Backend
- Custom Development
- Enterprise Solutions

Mobile Development

- Native iOS
- Native Android
- Cross Platform
- Hybrid Apps
- PWA

Cloud Engineering

- Cloud Consulting
- Cloud Migration
- Cloud Native App Development
- Serverless App
- Cloud architecture design

DevOps Engineering

- DevOps Consulting
- Infrastructure Optimization & Monitoring
- Infrastructure as Code
- CI/CD Implementation

Quality Engineering

- Manual Testing
- Test Automation
- Microservices Testing
- API Testing
- Performance Testing
- Security Testing

TECH EXPERTISE

Languages

- PHP
- Java
- Java Script
- C/C++
- Python

- Dart
- Swift
- Kotlin
- Ruby on Rails
- HTML/CSS

- MongoDB
- Firebase
- MySQL
- MSSQL
- Postgresql

Frameworks

- Laravel
- React Js
- VueJs
- NodeJs
- NextJs

- React Native
- Flutter
- Android/iOS
- Ionic
- Angular

- Shopify
- Magento
- WordPress
- BigCommerce
- Drupal

METHODOLOGY

Agile

Agile methods are often used in combination with frameworks like Scrum, Lean, and Kanban to provide a structured approach to project management. The focus is on delivering small chunks of functionality, or "iterations," on a frequent basis. This allows the team to deliver value to the customer as quickly as possible, while also being responsive to changing requirements and priorities.

Key Principals

1. Prioritizing client needs and delivering value early and often
2. Embracing change and adapting to new information
3. Collaborating with cross-functional teams
4. Measuring progress through working software and other tangible deliverables
5. Sustaining a culture of continuous improvement

ENGAGEMENT MODELS

Dedicated Model

"Hire prevetted talent to scale your business"

This model enables you to form your own team to work on your software development project so that you can remain focused on core business areas.

You can hire them on a full-time, part-time, or hourly basis, and they can range from a single developer to a team of developers who will work independently or in collaboration with another team.

Fixed Cost

*"Helping entrepreneurs and businesses to shape and validate their product concepts"*

This model is beneficial for projects with predefined scope and requirement. The primary goals and deliverables for the project are all predefined from the very beginning of the development process. It also allows for better planning and budgeting, as the cost of the project is known in advance.

Time & Material

Enabling "Flexibility and transparency with pay as you go method"

Depending on how the project lifecycle is changing, Time & Material model gives you the freedom to update project requirements, investigate new activity, and allocate resources. You can always buy a chunk of hours in advance and utilize them whenever it is required.

Audit your requirements

Determine scope and get deliverable approval

Assemble a team

Reach agreement on the rates and sign agreement

Start software development process

Deliver iterations

Release the product

Time & Materials

WHY PRECISE?

✓ **Best Talent Pool**

✓ **Scalable Solutions**

✓ **Intact Security**

✓ **Quality**

✓ **Flexibility**

✓ **Transparency**

✓ **Process-Centric**

✓ **Quick Turn Around**
